Certified MSTs on the same graph topology

Four separate small exports: n = 1,024, m = 16,384, b = 4, d = 16, graph seed = 5009

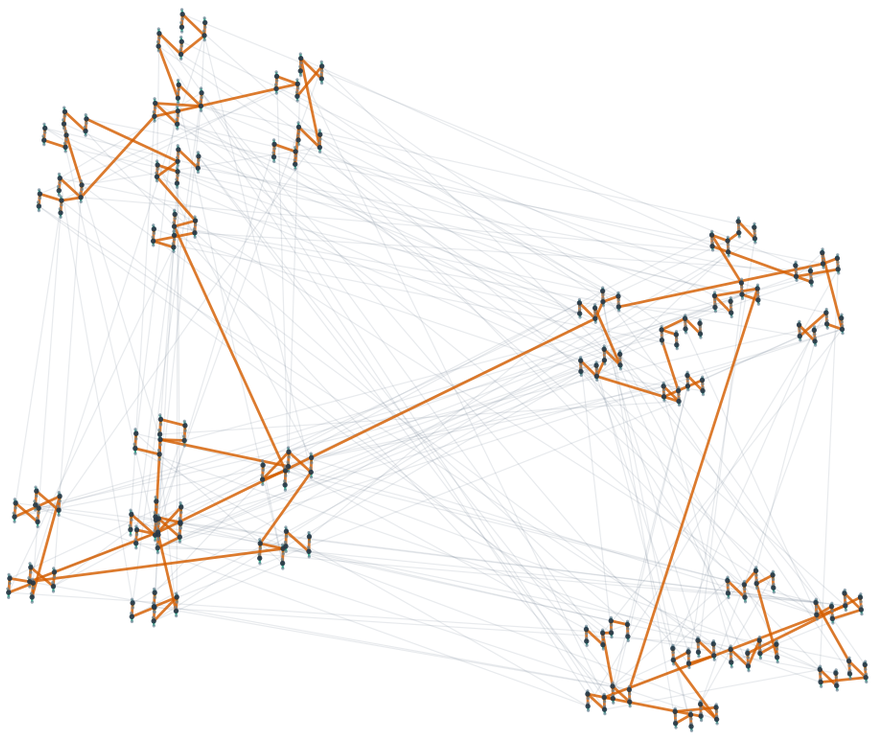

Illustrative coordinates and fixed camera; edge length is not cost. No timing or KKT filtering is depicted.

Hierarchy: prescribed backbone MST

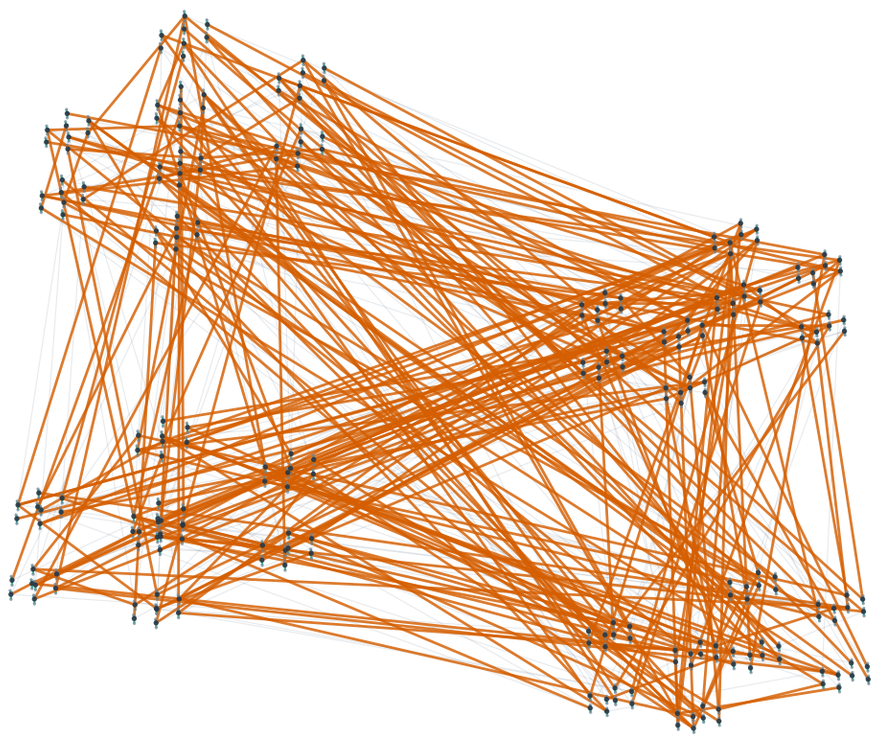

leaf_hierarchy4 · all 1,023 MST edges + 191 other edges visible
15,170 input edges hidden · 0/255 core MST edges are non-backbone

Dyadic distance: shortcuts are eligible

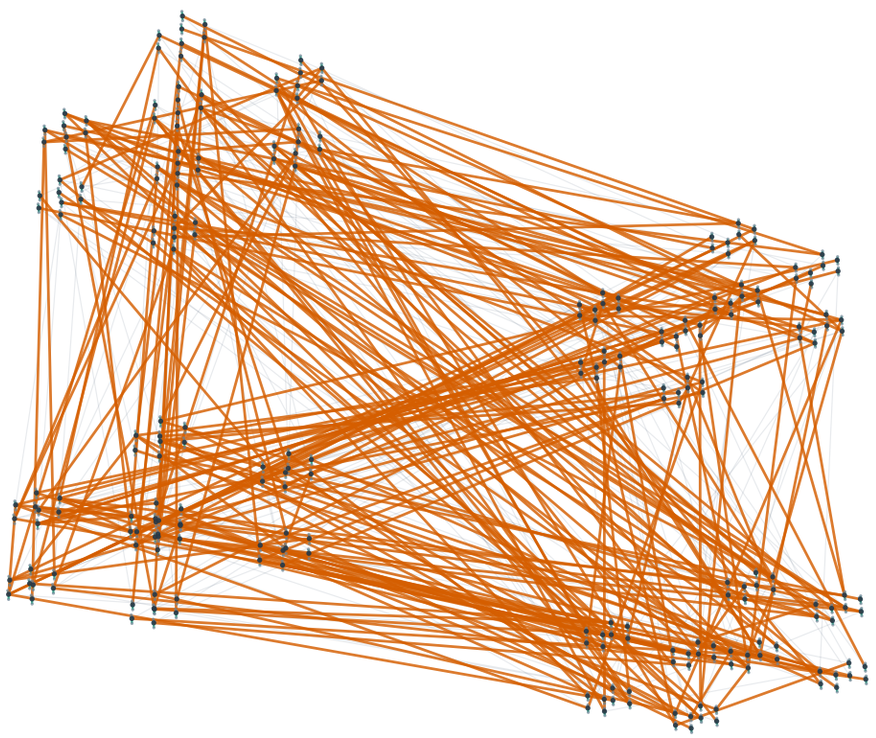

leaf_distance4 · all 1,023 MST edges + 188 other edges visible
15,173 input edges hidden · 86/255 core MST edges are non-backbone

Control: shuffled core costs

leaf_shuffled4 · all 1,023 MST edges + 189 other edges visible
15,172 input edges hidden · 254/255 core MST edges are non-backbone

Control: globally shuffled costs

leaf_random4 · all 1,023 MST edges + 187 other edges visible
15,174 input edges hidden · 254/255 core MST edges are non-backbone

All 768 pendant MST edges
All 255 core MST edges
Same 192 core context edges; MST overlaps drawn in color

Every connection drawn is an actual exported edge. Context selection uses only edge ID; omitted edges remain in full copied inputs.
