
Points are paired time ratios, summarized by medians over repetitions, sampling seeds, then graphs. Whiskers span the five graph medians; they are not confidence intervals.
Dashed: parity. Dotted: predeclared .90 case threshold; every graph ratio must also be <1 at both candidate sizes in both runs.
All calls retained, including 922.6 s KKT and 312.6 s compactor control observations. Desktop power transitions limit inference.
