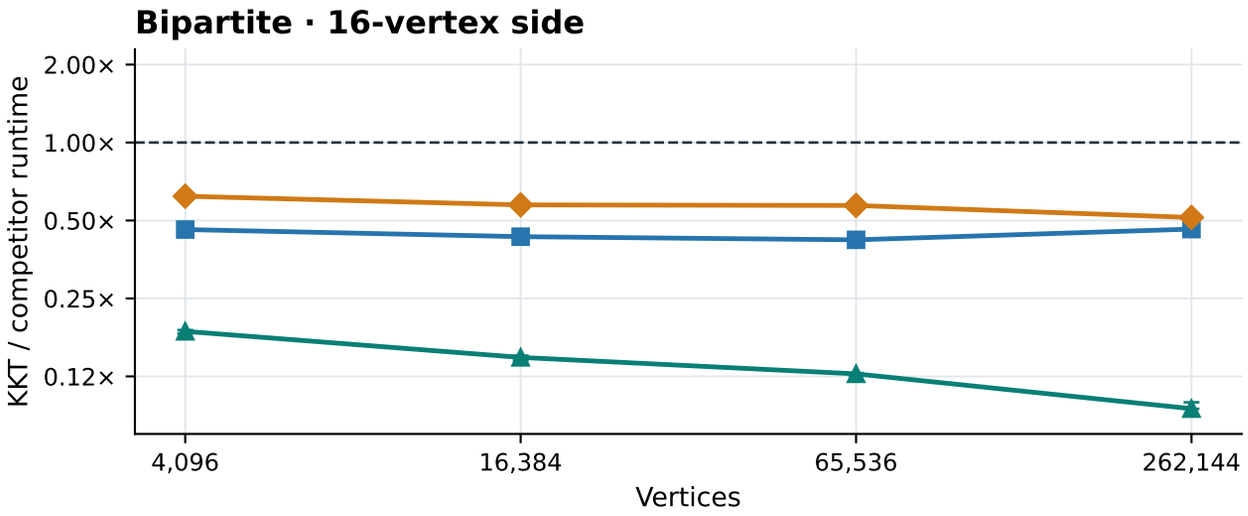
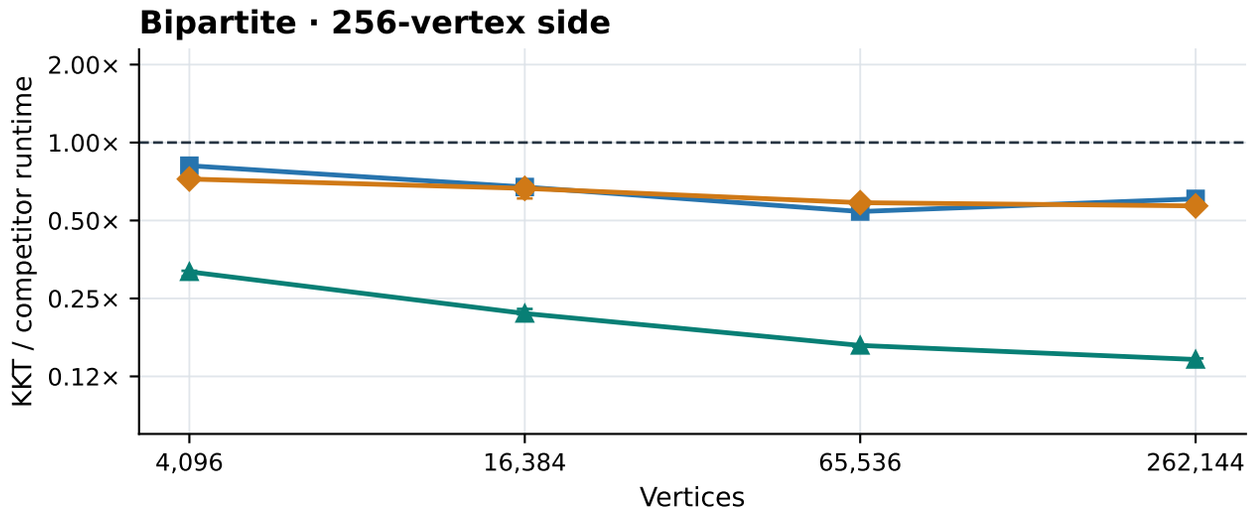
Common graph models: KKT versus every competitor

KKT / Kruskal · KKT / Prim · KKT / Borůvka

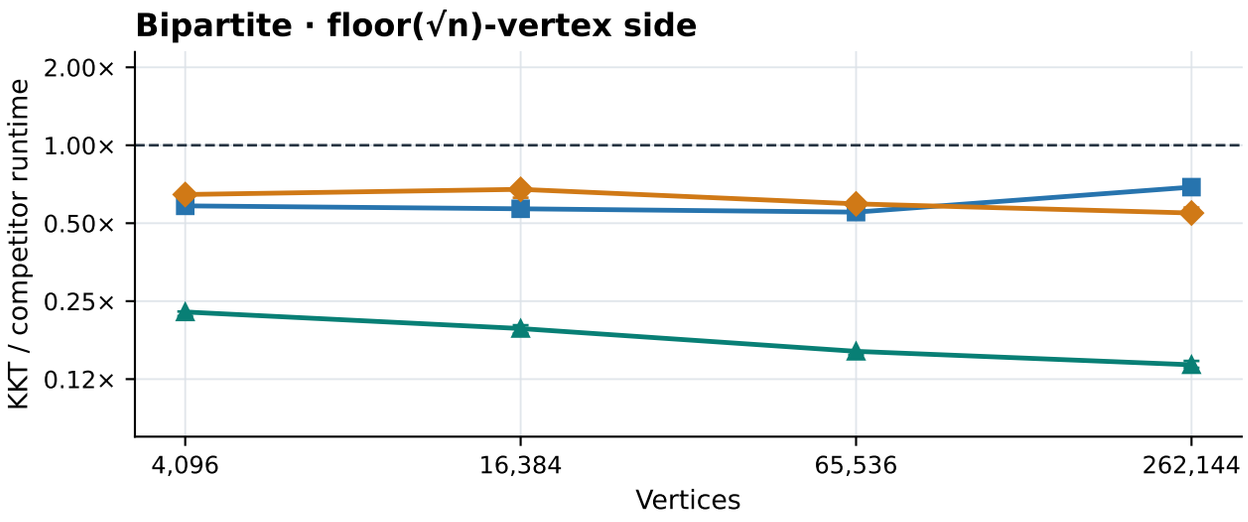
Bipartite · 16-vertex side



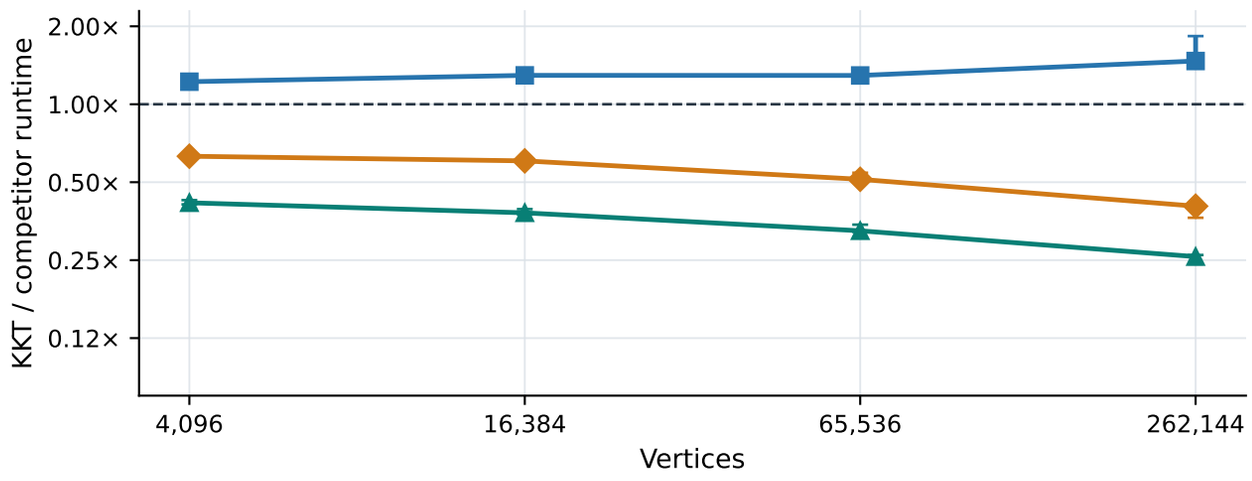
Bipartite · 256-vertex side



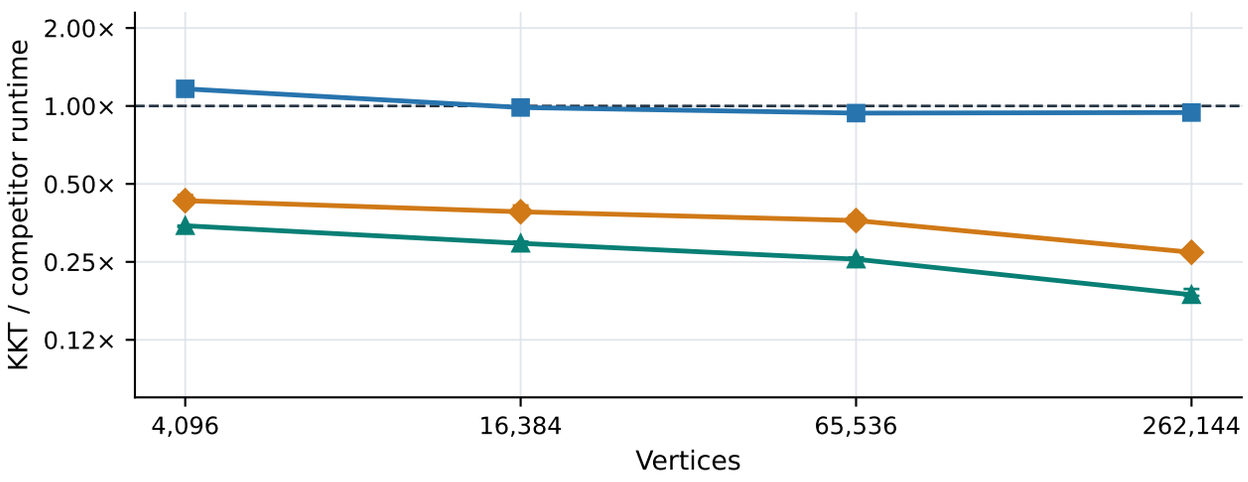
Bipartite · floor(√n)-vertex side



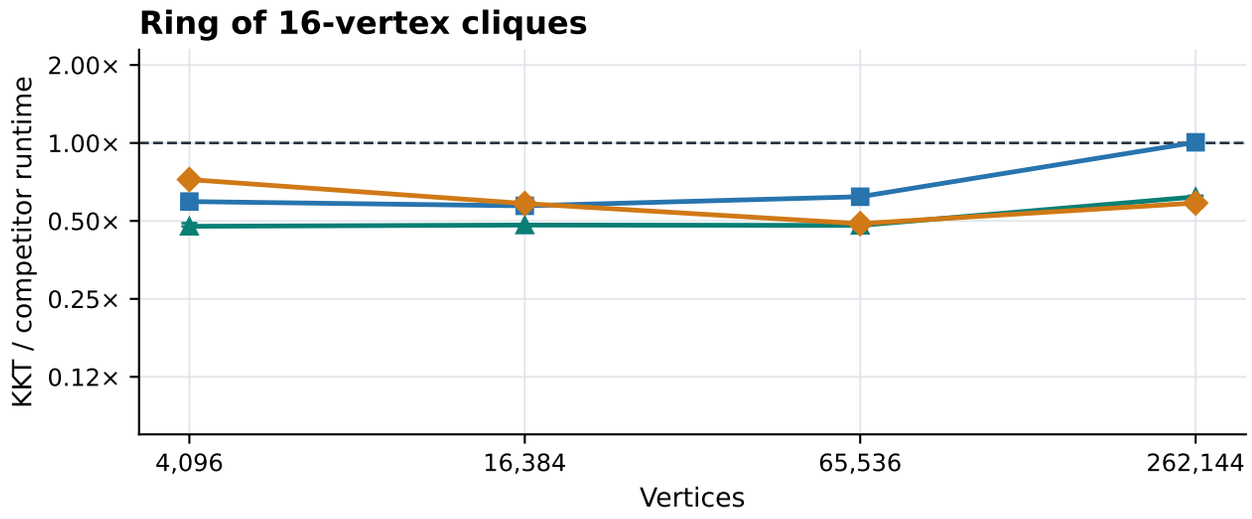
Core with 50% attached leaves



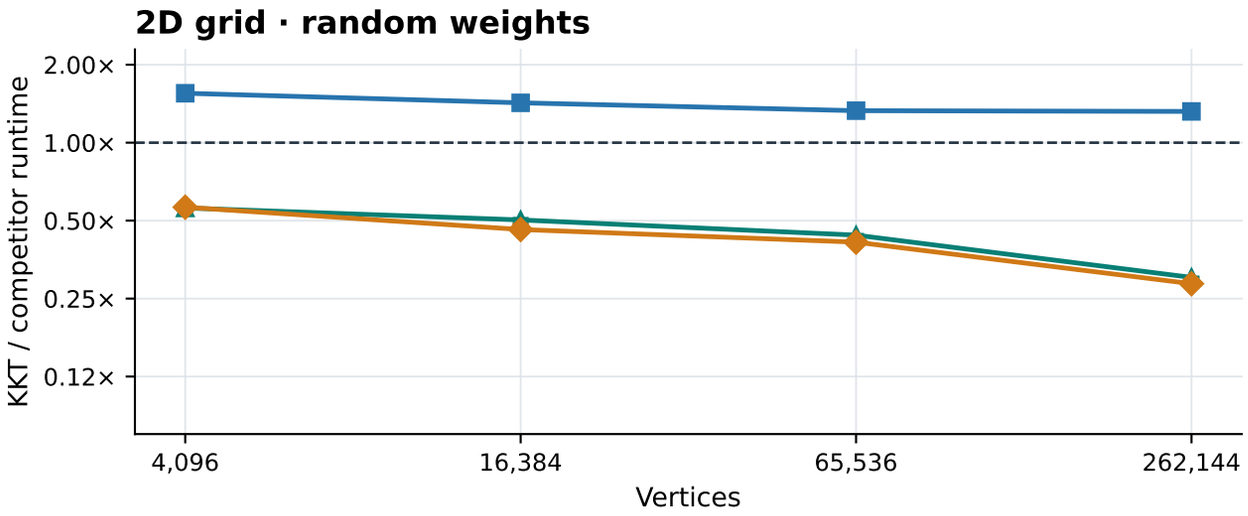
Core with ≥90% attached leaves



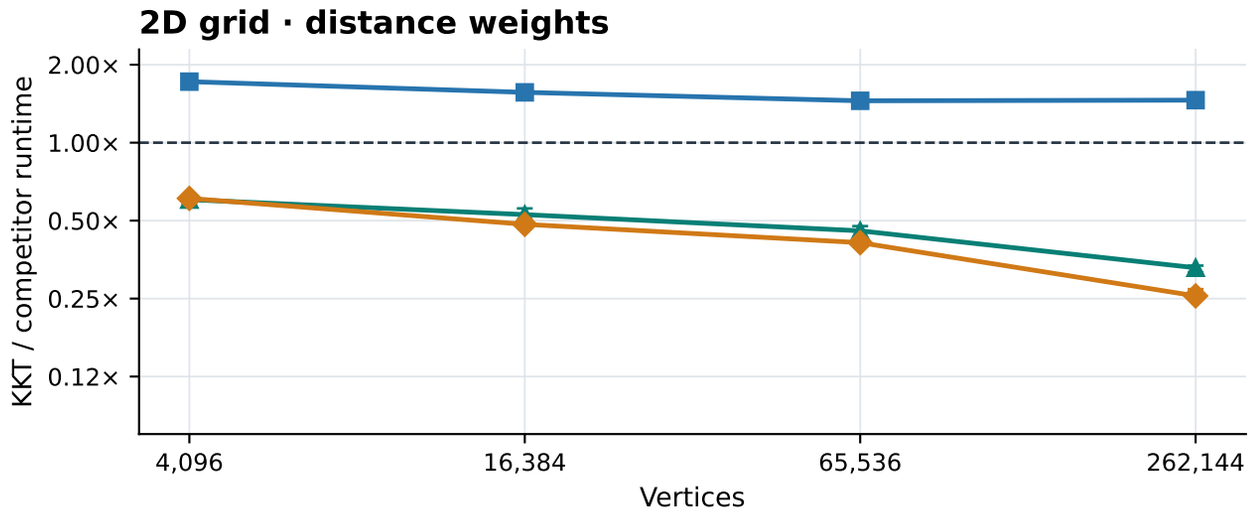
Ring of 16-vertex cliques



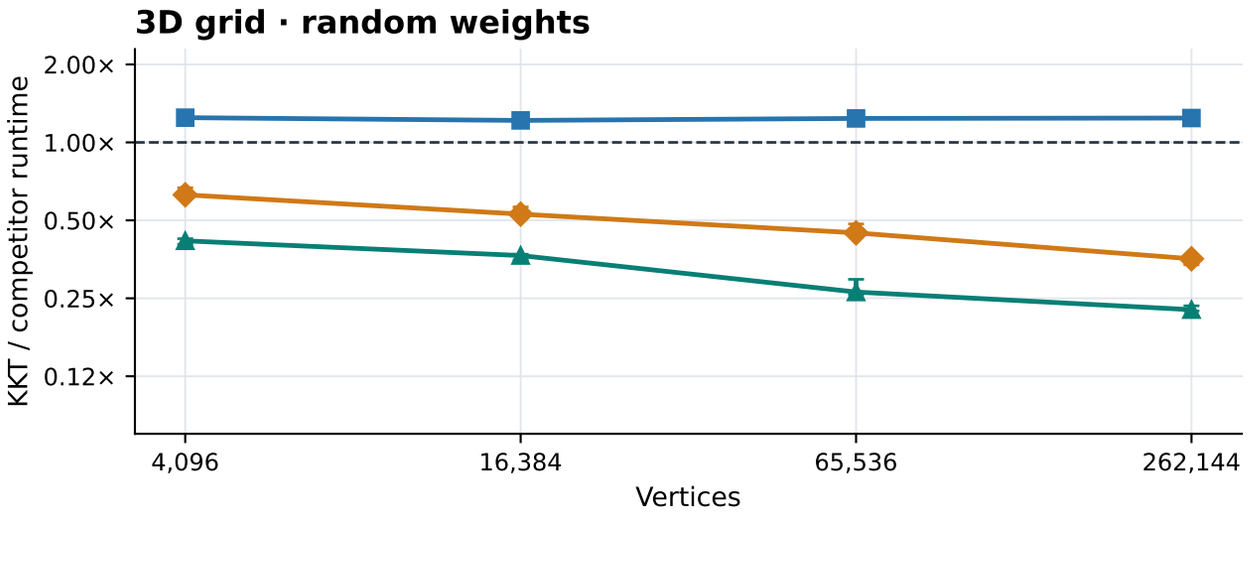
2D grid · random weights



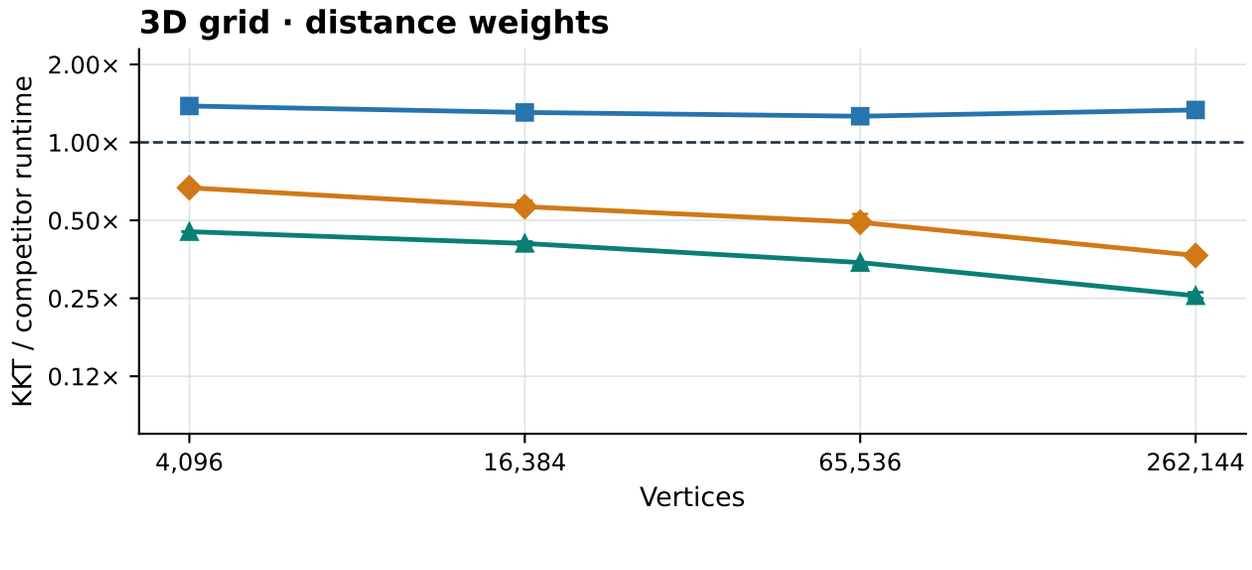
2D grid · distance weights



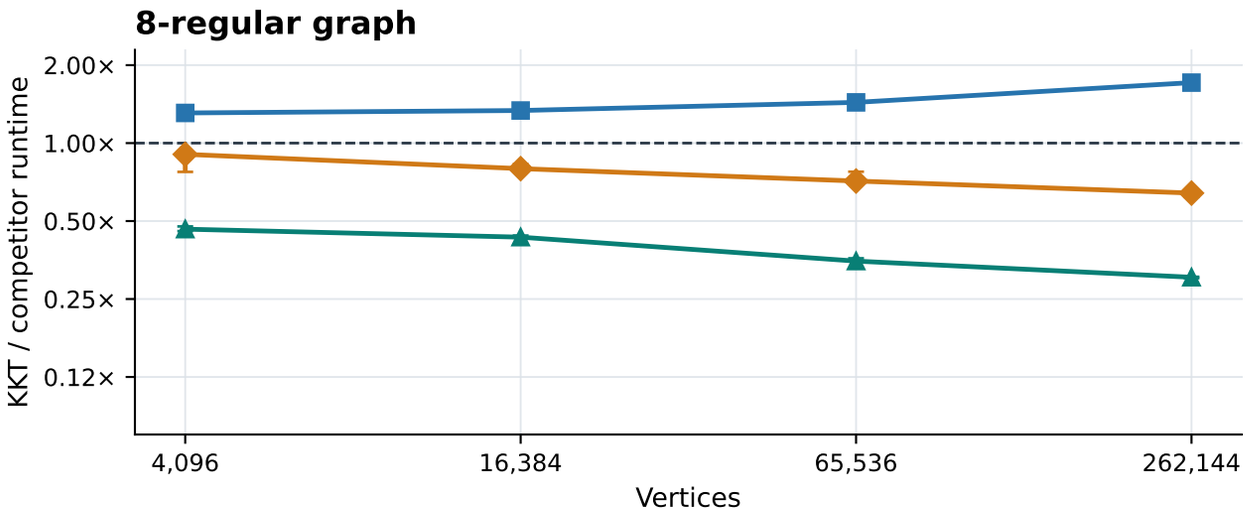
3D grid · random weights



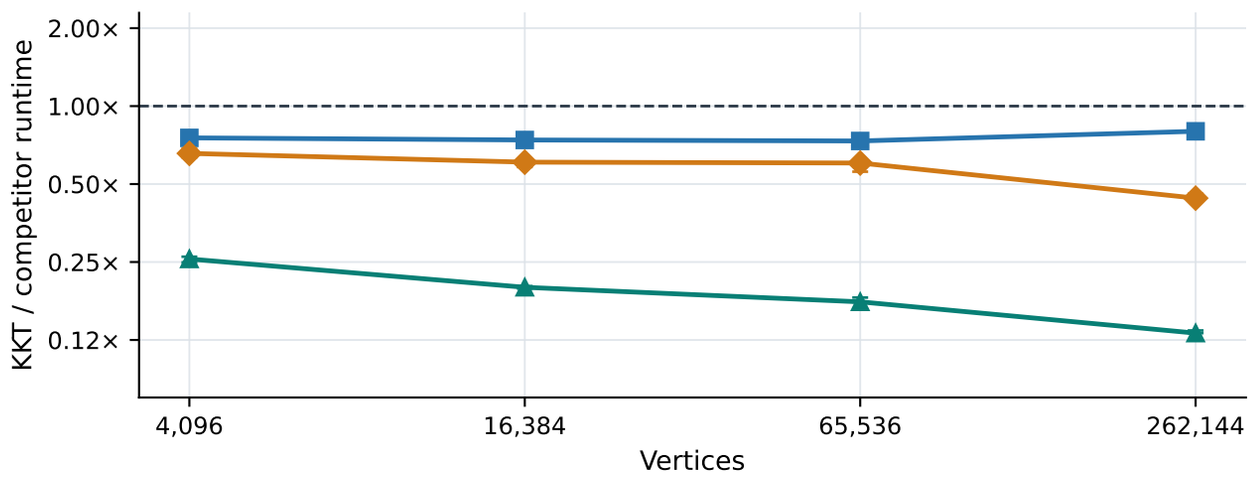
3D grid · distance weights



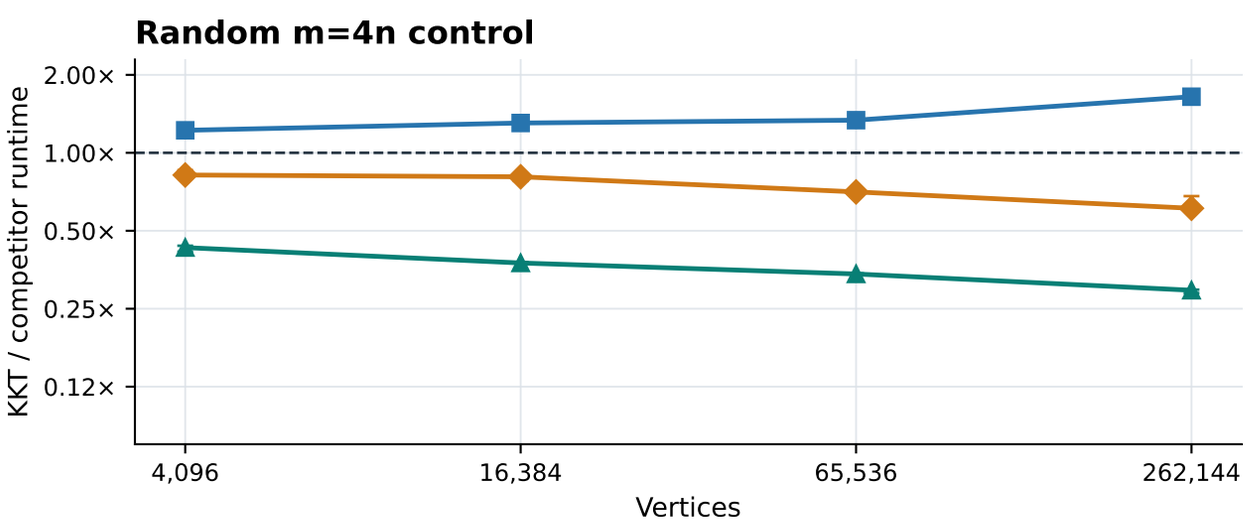
8-regular graph



Hub control



Random m=4n control



Below 1× favors KKT. Shared logarithmic ratio scale. Bars span three graph-level medians, not confidence intervals.
All requested shapes and sizes are retained; lines connect measured points only.
