Two graph medians
Full trial range

Solid points: medians of twelve paired ratios. Faint triangles: two six-trial graph medians. Vertical spans: every trial-range endpoint.
Two graph seeds × one fixed sampler; graph two reverses the full schedule. Repetitions reuse each realization; ranges are not confidence intervals.
Lines connect measured sizes, not inferred thresholds. All 0 flagged calls retained. No normalization or historical pooling.
Dashed: parity (1.00). Dotted: strong lead (0.90). Within each density, crossover needs both graphs/clocks, an earlier loss and all larger sizes strong.
